# OUR ORGANIZATION CHART

## OUR QUALITY POLICY

PECK Engineering, in the construction industry, provides turnkey services for electrical contracting and engineering solutions for all kinds of buildings. Working as a team in harmony with an experienced and dynamic staff and continuous training are the unchanging principles of the company. A professional approach with an amateur spirit for the goal of ongoing customer satisfaction is the working principle of PECK Engineering.

PECK Engineering; goal is to complete the work it undertakes, using advanced technology, with materials suitable for its purpose, in the shortest possible time and at the most affordable cost, by customer requirements, all laws, regulations and standards, by complying with occupational safety and environmental rules, is to develop and improve its target continuously.

PECK Engineering; it is an integral part of our business to take the necessary precautions to minimize the negative impacts on the environment during all our activities for a sustainable and developing future.

PECK Engineering; to support the solution of ecological problems encountered on a global and local scale, it aims to build “Green Building” certified systems where the principles that prepare the ground for the formation of a sustainable environment are applied and to be among the leading companies in this regard.

PECK Engineering; identifies control points in production processes and develops preventive systems for nonconformities; By taking preventive and corrective actions, it achieves its competitive power by producing quality every time and the first time.

PECK Engineering; considers the improvement of the health level of its employees, who are the most valuable assets in all activities, as a requirement of work efficiency. It considers work to prevent work accidents and occupational diseases as the basis of continuous improvement of Occupational Health and Safety performance. By applying Occupational Health and Safety and Environmental Management Systems, the system is regularly reviewed and continuously improved. Occupational health and safety and environmental risks are evaluated and measures are taken to prevent these risks. Hazards are eliminated from the source with the participation of all employees.
